## VINCI Energies CO2 performance ladder results

Our reports Energy Management Action Plans and CO2 emissions.

### Our approach

To actually achieve its objectives, VINCI Energies in the Netherlands uses the CO<sub>2</sub> Performance Ladder to check where it stands and to identify areas for action relating to acting in CO<sub>2</sub> aware ways in our business operations and in executing our projects. The key areas of focus are energy and fuel savings, the efficient use of materials and the use of renewable energy. Our observation is that gains can still be made here in our own business operations, as well as with our customers.

The CO<sub>2</sub> Performance Ladder comprises 4 aspects:

- Insight
- Reduction of CO<sub>2</sub> Emissions
- Transparency (internal and external)
- Participation in CO<sub>2</sub> Initiatives

The Energy Management Action Plan describes how VINCI Energies Netherlands BV meets the criteria associated with the CO<sub>2</sub> Performance Ladder. The company regularly communicates and reports on this. Do you like to know more? Have a look at [the SKAO website](#).
