

ICT: At the heart of the digital transformation

Connectivity, security, collaboration, mobile apps, business intelligence, cloud and more. Responding to the growth in demand for high-performance telecommunications infrastructure and services coming from private individuals, companies and local authorities is decisive if we want to meet one of society's greatest challenges: the digital transformation.

Industry: At the heart of the industrial performance

Mobile telephone operators and service providers, enterprises and public sector are all focusing on the same concern: developing their infrastructures and digital solutions. This explains the substantial investments being made across all the different networks: expanding infrastructure for mobile telephony and integration of networks for companies and local authorities.

A booming market for VINCI Energies
