

Industry: At the heart of the industrial performance

Optimising production processes and energy consumption are two key factors that can give industrial companies a competitive edge. This provides them with energy efficiency, reliability, the modernisation of their production facilities, etc. VINCI Energies supports its industrial customers throughout the world with engineering, implementation and maintenance services.

Active in all of the leading industrial sectors, VINCI Energies designs and implements customised solutions and services to enable its industrial customers to address the issues raised by technological change in the industrial environment. The Group provides its customers with true added value in each and every area of the Group's expertise: process operation and control, as well as electrical, mechanical and thermal engineering. VINCI Energies' business units are committed over the long term, with the main objective being to improve performance of our customers' production facilities and responding to their growing demand for traceable and secure processes.

A recognised expertise in the industrial sector

The Group's business units are acknowledged for their expertise in continuous industrial processes, which they offer to our customers in the food, oil, chemical, pharmaceutical and water treatment industries, among others.

Our expertise also covers manufacturing processes used to produce consumer goods and automobiles and in the aeronautic, aerospace and ship building industries. This wide-ranging know-how puts the Group in a leading position with offerings related to power distribution, command and monitoring systems and industrial robots, automation, air treatment, ventilation and interior insulation for industrial buildings. The Group also handles the operational maintenance and offers multi-technical and multi-site solutions, with a long term partnership perspective.

These solutions are provided via [Actemium](#), VINCI Energies' brand dedicated to industrial processes, and locally by Van der Linden & Veldhuis and G&H Akoestiek in the Netherlands
